1 Executive Summary

The Idaho Opportunity Scholarship program has expanded substantially over the last seven years and is by far the largest scholarship program the state administers. Original appropriations for the scholarship have gone from $5.1 million for FY2016 to over $20 million for FY2022. The objective of the program has been to increase college accessibility\(^1\) and to encourage positive college outcomes for economically disadvantaged students in Idaho. It is not a purely need-based program, rather it considers both merit and need as part of the applicant selection process. Students who graduate from an accredited Idaho high school (or its equivalent) and meet a minimum grade point average (GPA) requirement (currently set at 2.7) are eligible to apply for the scholarship. Scholarships are then awarded based on a student’s ranking and availability of funds. Ranking is weighted 70% towards a student’s financial need and 30% towards merit.

Both college accessibility and outcomes need to be considered when evaluating the scholarship program. To evaluate accessibility, scholarship participants’ demographics are compared to the demographics of a group meeting similar eligibility requirements (i.e. graduate from an Idaho high school in the same year with a 2.7 or higher GPA). To assess outcomes, scholarship participants are compared to a subset of the above eligible group with similar starting points in their postsecondary careers (i.e. go on to college immediately in the fall after graduating high school).

When it comes to college accessibility, there is a higher percentage of economically disadvantaged students who are eligible and apply for the scholarship as compared to overall eligible Idaho high school graduates. The economically disadvantaged portion of the eligible high school graduating class of 2020 was 39% compared to 45% participating in the Idaho Opportunity Scholarship program. Scholarship participants also differ across gender and race/ethnicity when compared to the underlying eligible population of high school graduates. Hispanic individuals make up a larger percentage of scholarship participants than the underlying eligible population of high school graduates (17% compared to 13%). Males are underrepresented when it comes to scholarship participation (37% compared to 44%).

For those students who attend an Idaho institution in the fall immediately following high school graduation, scholarship participants go to one of Idaho’s public 4-year institutions at a higher

\(^1\) College accessibility here refers to the objectives of the Idaho Opportunity Scholarship to: “provide access to eligible Idaho postsecondary education through funding to remove financial barriers;” and to “increase the opportunity for economically disadvantaged Idaho students;” (Idaho Code § 33-4304(1)(c)-(e)).
rate than their eligible counterparts. In looking at subsequent college outcomes, scholarship participants also show to be earning more credits than their counterparts during their college careers, which could be increasing their on-time bachelor’s degree completion rates. For the high school graduating class of 2017, 35% of the scholarship participant group completed a bachelor’s degree by the end of 2021 compared to 13% of the non-scholarship group completing a bachelor’s degree in the same amount of time.

Demographic differences between the above two groups when it comes to on-time bachelor’s degree completion is noteworthy. For the class of 2017, economically disadvantaged students make up 59% of the scholarship participant group compared to 19% of the non-scholarship group and Hispanic students make up 18% of the scholarship participant group compared to 7% of the non-scholarship group. These differences are similar to those observed in accessibility measures, which suggests the scholarship is reaching its intended population. In other words, even though the scholarship participant group was composed of students more likely to be economically disadvantaged and more likely to be Hispanic than the non-scholarship group, the scholarship participant group saw better outcomes.

The discussion of these results does not attribute causation of the outcomes to scholarship participation, rather the purpose is to report on observed comparisons in outcomes across groups for use in gaining a better understanding of the different populations.
2 DISCUSSION OF DATA AVAILABILITY

The framework of this analysis is limited to the data available to form meaningful comparison groups. The first high school graduating class with sufficient available data is the 2016 graduating class. The most recent award period containing non-preliminary outcomes data is for the 2020-2021 school year, and the most recent complete period for college outcomes is for the 2020-2021 period. Therefore, the analysis focuses on the high school graduating classes of 2016, 2017, 2018, 2019, and 2020 and their scholarship eligibility for the period following high school graduation. For example, students in the high school graduating class of 2020 were eligible to apply and receive an award in the 2020-2021 period and their outcomes are limited to only those available in the 2020-2021 period. Each high school graduating class’s outcomes are limited by the number of years that has elapsed up to the 2020-2021 period. Consequently, not all high school graduating classes will have all outcomes available for observation.

The high school graduating class of 2021 will be included in some of the figures in the Background section to provide a more current glimpse of general trends, but will be excluded from subsequent sections and analyses due to incompleteness of outcomes data for this group.

3 BACKGROUND

To be considered eligible for an Idaho Opportunity Scholarship, a student must have graduated from an accredited Idaho high school or its equivalent (i.e. homeschool, GED, etc.) and meet a minimum high school GPA requirement. The minimum high school GPA requirement has changed over time, impacting the underlying eligible population. From 2007 to 2017, the minimum high school GPA requirement was 3.0. In 2018, the requirement was changed to 2.7 for traditional students and 2.5 for adult learners with some credits and no degree.

4 IDAHO HIGH SCHOOL GRADUATES WITH AN ELIGIBLE HIGH SCHOOL GPA

What does this change in GPA eligibility mean when it comes to Idaho high school graduates? To answer this question, we need to first understand from a historical perspective the number of students who were eligible based on their high school GPA before and after the policy change. The figure below shows a visible shift in the number and proportion of eligible students between years 2017 and 2018. The class of 2020 saw a visible increase in it’s GPA eligible portion and has continued with the class of 2021.
Figure 1. Percent of high school graduating class GPA eligible before and after policy change
Coupled with this expansion in eligibility was an increase in funds available for scholarship recipients. Over the seven year period between fiscal years 2016 and 2022, original appropriations for the scholarship have gone from $5.1 million to over $20 million. These increases can be observed in the figure below. The increase in appropriations resulted in more awards being available to more eligible students.

![Figure 2. Original appropriations for Idaho Opportunity Scholarship](image)

Also during this seven year period was an increase in the maximum award amount from $3,000 in 2016-2017 to $3,500 the next year and continuing on to current. This increase can be observed in the figure below, with the largest increase of awards being seen in the 2019-2020 award year. Since 2019-2020, appropriations have remained relatively constant and therefore so have total offered awards.
Figure 3. Total number of awards offered showing changes in maximum award amounts

2021-2022 is a darker shade to indicate that this award cycle is not yet finalized.
Idaho Opportunity Scholarship awardees vary across award years, with some years having more new awards while others have more renewals. The scholarship is limited to four years and renewals must meet certain yearly credit requirements. This is to encourage students to earn their degree within a four-year time frame, and is one of the reasons for fluctuations in award types by year. The funds available for new awards to be offered is dependent upon the number of awardees who are eligible to renew. The scholarship awards are a four-year award based on renewal requirements and availability of funds. Renewal awards are made prior to new awards. The figure below depicts the changing proportions of new and renewal award types over time.

Figure 4. Percentage of new and renewal award types by award year

2021-2022 is transparent to indicate that this award cycle is not yet finalized
Both new and renewal awards are composed of Idaho high school graduates from different graduating classes. In the figure below, it can be seen that the majority of new awards go to those who have just graduated within the last year, comprising between 61% and 79% over the past five award years. To provide meaningful insights about the Idaho Opportunity Scholarship program, the target group for subsequent analyses and comparisons is composed of the new applicants who have graduated from high school within one year of applying for the scholarship.

Figure 5. Composition of different high school graduating classes of new and renewal awards
Objectives of the Idaho Opportunity Scholarship include to: “provide access to eligible Idaho postsecondary education through funding to remove financial barriers;” “increase the opportunity for economically disadvantaged Idaho students;” and “incentivize students to complete a postsecondary education degree or certificate” (Idaho Code § 33-4304(1)(c)-(e)). Two broad themes emerge from these objectives, the first being accessibility of college entry to economically disadvantaged students and the second being the outcomes of that target group of students. To form a better picture of how the Idaho Opportunity Scholarship may be reaching these objectives, is to first look at the makeup of the underlying population of Idaho high school graduates who meet the minimum GPA requirements to be considered for the scholarship.

5 ACCESSIBILITY

To describe the underlying population and to compare it to scholarship applicants and recipients, the following demographics are used: economically disadvantaged status, gender, and race/ethnicity. First, it is important to understand what proportion of the GPA eligible graduating class applied for the scholarship over time.

5.1 What Percentage of the GPA Eligible High School Graduates Applied for the Scholarship?

Since the high school graduating class of 2016, the proportion of eligible graduates who apply for the scholarship their senior year of high school has increased, the largest being seen with the class of 2019. The class of 2020, however, has markedly different behaviors from that of previous graduating classes when it comes to applying for the first time the year after graduation. The class of 2020 saw a 18 percentage point decrease in the number of eligible graduates applying for the Idaho Opportunity Scholarship for the first time in the year following high school graduation. A possible explanation for this observation is that the class of 2020 graduated at the beginning of the COVID-19 pandemic. This event caused widespread disruptions to daily life, including schools and institutions closing and moving instruction to online formats. According to key findings in a recent December 2021 report by the National Student Clearinghouse, “[v]ery few 2020 high school graduates took a gap year. Of those who did not immediately enroll in fall 2020, only 2.0 percent made their way back to college in fall 2021.” These findings reflect what can be observed in the class of 2020’s Idaho Opportunity application patterns.

The class of 2021 does not yet have data for those who would be applying one year after graduating (the application window closes on March 1, 2022), but it is promising to see an increase in those who did apply their senior year. To ensure the most similar comparison

2 https://nsceresearchcenter.org/high-school-benchmarks/
groups, the following sections will focus only on those high school graduates who applied to the Idaho Opportunity Scholarship their senior year.

![Bar chart showing the time of application for the scholarship for high school graduating classes from 2016 to 2021.](chart.png)

*Figure 6. Eligible applicants who do and do not apply within one year or less of high school graduation*

### 5.2 How Many of the GPA Eligible High School Graduates were Economically Disadvantaged Compared to those who Applied?

The percentage of economically disadvantaged high school graduates (Eligible) has ranged from 39% to 41% and was 39% for the 2020 graduating class. In comparison, the percentage who apply for the scholarship (Eligible | Applied) who are economically disadvantaged tends to be greater, and has followed this trend from 2016 to 2020, as can be seen in the following figure.
5.3 How Many of the GPA Eligible High School Graduates were Non-White?

The proportion of Hispanic students who apply for the scholarship (Eligible | Applied) has consistently been greater than the proportion of Hispanic students in the underlying eligible population (Eligible). American Indian and Other\(^3\) demographic groups tend to see similar proportions between applicants and the underlying eligible population (see figures below).

---

\(^3\) Due to small cell sizes, Other category includes Black, Two or More, Asian, Hawaiian.
Figure 8. Comparison of eligible Hispanic student proportions
Figure 9. Comparison of eligible American Indian student proportions
Figure 10. Comparison of eligible Other student proportions

Other category includes Black, Two or More, Asian, Hawaiian
5.4 How Many of the GPA Eligible High School Graduates were Male or Female Compared to those who Applied?

The proportion of males who apply for the scholarship (Eligible | Applied) has consistently been lower than the proportion of males in the underlying eligible population (Eligible). This trend can be seen in the figure below where males represent between 29% and 37% of eligible applicants compared to between 42% and 44% who are eligible to apply.
The Idaho Opportunity Scholarship appears to do well at serving economically disadvantaged and Hispanic students when looking at the composition of the eligible comparison group. Males, however, are a group that is under-represented. The under-representation of males is not unique to the Idaho Opportunity Scholarship, as a gender gap is persistently present in postsecondary enrollment rates previously published by the Office of the State Board of Education.

6 Outcomes

To gauge the college outcomes of Idaho Opportunity Scholarship recipients, it is important to compare those outcomes against an appropriately similar population. In each of the following sections, the comparison groups will be explained and then their results discussed.

6.1 College Attendance: Fall Immediate

One important college outcome is the rate at which high school graduates attend college in the fall immediately after graduating high school. For this outcome measure, the GPA eligible high school graduates are compared to those who were eligible and applied for the Idaho Opportunity Scholarship in their senior year of high school. In the figure below, it is apparent that those who are eligible and apply for the scholarship attend college immediately at a higher rate.
rate than those who are eligible to apply but do not apply. For the graduating class of 2020, those who are eligible and apply for the scholarship enrolled in postsecondary in the immediate fall at a rate of 68%\(^4\) versus 48% who are eligible and did not apply for the scholarship. This trend can be seen in the following figure. What is also made apparent is how drastically different the class of 2020 is from previous graduating classes, likely because of the pandemic.

![Figure 13. Comparison of immediate fall college attendance rates](image)

For other college outcome measures discussed in the following sections, the comparison groups are composed of a subset of the above comparison groups. The GPA eligible high school graduates comparison group is limited to only those who went on to college in the immediate fall after high school graduation (Attend Immediately). The Idaho Opportunity Scholarship comparison group is composed of those who went on to college in the immediate fall after high school graduation, were eligible and applied in their senior year, and were awarded in the fall following high school graduation. This means that they went on to college in the same time span as the comparison group.

### 6.2 College Attendance: Fall Immediate Behaviors

\(^4\) Not all of the eligible students who apply for the scholarship receive or accept an award, therefore this group’s college attendance rate is less than 100%.
Scholarship recipients attend in-state institutions at a higher rate than their eligible high school graduate counterparts because acceptance of the award is contingent upon attending an eligible Idaho institution. This can be seen in the figure below, showing that those who do not receive a scholarship do indeed attend out-of-state institutions. Again, the class of 2020 exhibits different behaviors than previous classes, especially in the non-scholarship recipient group. It appears that for those who did enroll in postsecondary in the immediate fall, they were less likely to enroll out of state. It is possible this behavior was due to institutions closing campuses across the nation during the pandemic.

Figure 14. Comparison of immediate fall college attendance by type of institution
Looking only at those students who go on to attend an Idaho institution, scholarship recipients are more likely to attend one of the public, 4-year universities compared to their counterparts. In both groups, however, moderate increases can be seen in attendance of the public 2-year institutions for the past several high school graduating classes, which can be seen in the figure below.

![Figure 15. Comparison of immediate fall college attendance in Idaho institutions by type of institution](image)

### 6.3 College Credits\(^5\)

Some of the ways to gauge student progress toward degree completion are to look at credits taken per year as well as credits accumulated over the course of college attendance. It is common for a minimum of 60 credits to be required for an associate degree (over at least two years) and 120 credits to be required for a bachelor’s degree (over at least four years). While not true in all cases, these credit minimums and time spans provide a useful point of comparison when assessing progress to degree completion.

Using the above credit benchmarks and time spans, a student would need to take and accumulate 30 credits every year to earn a degree within the common time spans associated

---

\(^5\) College credit outcomes are limited to only those taken at one of the Idaho public institutions as college credit data is not available for students who attend out-of-state or private institutions. Degree completion data, however, is available for students attending out-of-state and private institutions.
with associate and bachelor’s degrees. The Idaho Opportunity Scholarship credit requirements for renewal and four-year time frame are designed to incentivize students to earn their credential within the four-year period. In the following figures, the scholarship recipients take more credits each year and therefore accumulated more credits than their eligible counterparts. The largest gap can be seen in the first year, where scholarship recipients tend to take between three and five more credits than the comparison group. This gap lessens in following years, but it does not close by year four, when scholarship recipients have accumulated between seven and 10 more credits on average than their counterparts. The impact of this credit gap may also be observed when looking at degree completions.

6.3.1 Median Credits Taken* per Year

The following four graphs show a comparison of the median credit load students have taken on a per year basis. These figures do not show how many credits were accumulated over the students’ college careers; rather, they are representative of annual full-time or part-time credit taking behaviors.

![Figure 16. Comparison of median credits taken per year, year one](image)

---

*Credits taken refers to how many credits were attempted and then earned in one year.
Figure 17. Comparison of median credits taken per year, year two

6.3.2 Median Credits Accumulated\(^7\) by Year End

The following four graphs show a comparison of the median credit accumulation of students over their college careers. These graphs are representative of how students are progressing toward credit requirements for degree completion.

---

\(^7\) Credits accumulated refers to how many credits were attempted and then earned, summed up (accumulated) over the different time spans.
Figure 20. Comparison of median credits accumulated by end of year one

Figure 21. Comparison of median credits accumulated by end of year two
Figure 22. Comparison of median credits accumulated by end of year three

Figure 23. Comparison of median credits accumulated by end of year four
6.4 Degree Completion

Earning an associate degree is not always the end of a student’s education, but can be seen as an intermediate point on the way to bachelor’s degree completion. Not all students receive an associate degree before earning their bachelor’s degree, but it is still valuable to look at associate degree completion rates. Idaho Opportunity Scholarship recipients tend to earn associate degrees on time (within two years) at a higher rate than their eligible high school graduate counterparts, as seen in the figure below.

![Figure 24. Comparison of associate degree completion rates](image)

6.4.1 Bachelor’s Degree Completers

The 2016 and 2017 high school graduates have seen enough time elapsed to evaluate their on-time (within 4 years) progress toward bachelor’s degree completion. By the end of their fourth year\(^8\) of postsecondary education, 37% of the class of 2016 and 35% of the class of 2017 scholarship recipients have received a bachelor’s degree compared to 23% and 13% of the eligible high school comparison group (see figure below).

---

\(^8\) The end of the fourth year of postsecondary education is most closely related to on-time or 100% of time graduation rate measures for bachelor’s degree seekers.
The class of 2017’s on-time bachelor’s degree completion rate decreased for both the scholarship recipient group and the eligible high school comparison group. However, the non-recipients saw a more substantial decrease (10 percentage points) than the scholarship recipient group (2 percentage point decrease). The class of 2017 would have been starting their last year of college in the midst of the pandemic which likely could have impacted their ability to finish on time.

**Bachelor’s Degree Completion**

![Bar chart showing bachelor's degree completion rates](chart)

### 6.4.1.1 Subgroups of Bachelor’s Degree Completers

The scholarship recipient group of on-time bachelor’s degree completers is made up of a higher percentage of economically disadvantaged and Hispanic students than the comparison group. This pattern was observed in the previous Accessibility section and holds true through bachelor’s degree completion, at least for the high school graduating classes of 2016 and 2017. The following figures show bachelor’s degree completions across the different demographic groups of economically disadvantaged status, gender, and race/ethnicity.

The difference between bachelor’s degree completion rates of economically disadvantaged students between the two groups is notable. When looking at accessibility, the percentage of economically disadvantaged students in the GPA eligible high school graduating class of 2017 was 38% compared to 69% who were eligible and applied for the scholarship. Contrast this with the composition of the bachelor’s degree completers below where economically disadvantaged students make up 59% of the scholarship group and only 19% of the comparison group.
Economically Disadvantaged Status

Figure 25. Comparison of bachelor’s degree completion rates by economically disadvantaged status
In the following figure, Hispanic\(^9\) students make up 18% of the scholarship participant group for the class of 2017 compared to 7% of the non-scholarship group. In comparison, the percentage of Hispanic students in the GPA eligible high school graduating class of 2017 was 10% compared to 21% who were eligible and applied for the scholarship.

**Figure 26. Comparison of bachelor’s degree completion rates by race/ethnicity**

\(^9\) Due to small cell sizes, All Other category includes Black, Two or More, Asian, American Indian, Hawaiian.
The trend in the gap between males and females is still apparent in on-time bachelor’s degree completion across both groups, as can be seen in the following figure. For the class of 2017, males in the scholarship group account for 32% of on-time completers compared to 38% in the non-scholarship group. In comparison, the percentage of males in the GPA eligible high school graduating class of 2017 was 42% compared to 29% who were eligible and applied for the scholarship. What is interesting about the class of 2017 on-time bachelor’s degree completers is that there are no statistically significant differences between the scholarship recipient group and the non-recipient group for gender.

7 OTHER SCHOLARSHIP PROGRAMS & ADDITIONAL INFORMATION

7.1 Applicants Awarded by Program

Overall, the Opportunity Scholarship makes up the majority of awarded scholarships across the award years 2015-2016 to 2020-2021. The Opportunity Scholarship for Adult Learners, which is a subset of the Idaho Opportunity Scholarship program, represents close to 2% of total awards and just finished its third award cycle in which it did see an increase. The GEAR UP Idaho Scholarship (now GEAR UP 2) represents the second largest program followed by Postsecondary Credit Scholarship and Armed Forces and Public Safety Officer Scholarship. The figure below summarizes the number of scholarships awarded across the award years, along with each program’s percentage of total awards.

Figure 28. Number of awards and percent of total awards
